Software Engineer

Detail oriented software engineer that is passionate about problem-solving and creating innovative applications. Proficient in designing and implementing user-centric applications, with experience in C++, Java, Python, JavaScript and many JavaScript frameworks.

SKILLS

React | Node | Svelte | HTML | CSS | Tailwind | MongoDB | C++ | Java | Python | MySQL | Microsoft Office Suite | Hardware | Troubleshooting | Teamwork

EDUCATION

Austin Community College | Bachelor of Applied Science (BAS) in Software Development | Dec 2025

SPECIALIZED COURSEWORK AND PROJECTS

Job Journal: (React, Hono, Drizzle, Neon, Cloudflare Workers) Full-Stack application that can track, organize, and manage job applications through every stage of the hiring pipeline — all in one searchable, filterable dashboard.

Site: <https://jobjournal.corymhayes-017.workers.dev/> | Github: <https://github.com/corymhayes/job-journal>

TablatureDB: (Svelte, Tailwind, Dexie.js, shadcn-svelte) I play guitar and use tabs to learn songs. I repeatedly found myself coming back to the same ones, so I decided to make a local-first CRUD application where I can store my tabs.

Site: <https://tablaturedb.com> | Github: <https://github.com/corymhayes/tablaturedb.com>

Running Planner: (Svelte, Tailwind, Dexie.js, shadcn-svelte) A super simple running planner, that I wanted to be both easy to schedule but also flexible in the types of workouts. I came up with the design first and when I learned about local first web development I thought it would be a perfect fit.

Site: <https://running-planner.corymhayes.com/> | Github: <https://github.com/corymhayes/running-planner>

Episode Unknown: (React, Material UI, Open Movie Database API) There are a few shows where I like to rewatch episodes. But I always found it difficult to decide on which one to watch. So using React and The Movie Database API, I created an application that lets you input a show and outputs a random episode from that series.
